Software Program!**

Dairy Comp[®]

Herd Management Software

Dairy Comp 305

The most complete software available!

Designed for use in large herds, and constantly updated to meet your future needs, Dairy Comp 305 can handle the information requirements of the largest and most complex dairy enterprise.

With other herd management software you only get part of your herd management information. Some give you milking and parlour performance data, others give you herd event and reproduction information. Only Dairy Comp 305 can bring all your information together to help you make the informed, profit-minded decisions that are right for your farm.

It's all here in one system - Dairy Comp 305!

Service and support

On-farm training is included with every Dairy Comp 305 installation. We'll make sure the software works with your computer. And a network of product support specialists is available by phone, on-line or in person when you need them.

"The on-farm and phone support for Dairy Comp 305 has been tremendous. They customized our reports so we get the information we need and use every day. We don't know how a manager of a large herd could be without Dairy Comp 305."

Al & Gary Fadden,
Fadholm Farms Abbotsford, BC

Data-link to advisors

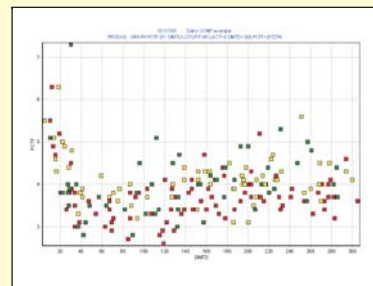

Dairy Comp 305 is the software of choice with most dairy advisors. With Dairy Comp, your advisors can access your herd information to provide specific and timely solutions to your management issues.

Complete herd analysis at your fingertips

Dairy Comp 305 gives users complete flexibility to create any herd report or graph they would like. Information can be fully customized to support their farm management style and information needs. Herd managers can print reports automatically on a pre-set schedule to help plan management activities. Graphs can be printed to help analyze the herd's production levels, reproductive performance, health status, or future value of cows in the herd.

With timely, accurate and complete information available, the task of monitoring the herd is straight-forward which translates into increased profit for the dairy.

Two examples of the customizable graphs that can be produced using Dairy Comp 305 are shown above. The graph on the left shows milk component levels by stage of lactation, which can show the impact of ration changes and the effectiveness of the herd's dry-cow program. The graph on the right shows pregnancy rate for the milking herd which allows users to easily track reproductive performance to help identify and deal with issues quickly.

"With Dairy Comp 305 we've been able to track 'open' cows and heifers much closer than before. This has helped us reduce average days-open and calve heifers at the optimal age. 'Days-open' cost us money. Dairy Comp 305 makes us money."

Alain Leduc,
Gillette Farms, Embrun, ON

Combine herd and parlour data

Dairy Comp 305 easily and seamlessly interfaces with parlour manufacturers' software. All your important herd data can be combined for consistent reporting of herd activities and complete analysis of herd and parlour efficiency issues for more effective problem solving.

"Dairy Comp 305 makes herd management so much easier. It brings my herd and parlour data together in one system. It's so user friendly. I can make all the reports I want. Dairy Comp 305 is one of the best purchases I've made."

Jan Prehn, Prehn Farms, Ripley, ON
